Food webs can be simplified in two ways. We can group species in a given community into broad functional groups. For example, phytoplankton can be grouped as primary producers in an aquatic food web. A second way to simplify a food web is to isolate a portion of the web that interacts little with the rest of the community. Each food chain within a food web is usually only a few links long ...

Our analysis reveals that the global marine biomass pyramid contains more consumers than producers, thus increasing the scope of previous observations on inverse food pyramids. Finally, we highlight that the mass of humans is an order of magnitude higher than that of all wild mammals combined and report the historical impact of humanity on the global biomass of prominent taxa, including ...
